

# Oasis Practice Management Software

## Forms Designer

The Oasis Forms Designer is included in each Oasis installation. The Designer enables you to build complete graphical forms for use in printing patient correspondence such as billing statements, treatment plans, appointment lists and progressive contracts.

Main Street Dental Group

### Graphical Forms

Use the Designer to create complex graphical forms. Embed commands within Oasis's forms Script Language Editor to position these forms or sections of forms on the page when printing. (eg bankcard boxes, logos, statement messages, treatment plan options etc)

### Labels and Envelopes

The Designer includes a label formatter that supports both Dos and Windows label printers including the latest Seiko smart label system. Use the Script Language Editor to customize sticky labels, envelopes and even complete forms with integrated graphics, printer control commands and patient merge data.

### Drag/Drop Interface

The Designer offers a unique "drag/drop" object interface enabling line graphics, paragraphs, clipboard images and windows bitmapped files (such as practice logos) to be easily incorporated on the Form.

### About

The Designer offers features unknown in any other comparable Practice Management System. It enables your Oasis installer (or the practice) to customize the complete appearance or format of all patient correspondence.

The Scripting Language offers a complete 4GL language interface for positioning of text, data variables, graphics, color plus complete control of paper size, printer and bin selection.

The interface also includes full nested variables, plus if/iffend statements enabling data to be tested and printed on conditions being met. (eg if patient balance in 90 days, draw graphic showing stern picture and wording on statement.)
