

Oasis Practice Management Software

Standby Manager

The Oasis Standby Manager lets you build a database of all patients requiring future appointments, ensuring that these patients do not fall out of the system and enabling you to minimize the potential for lost income due to cancellations and noshows.

Doctors and Hygienists	Data Entry

OASIS supports a multi practitioner standby system. This means standby records can be linked to both Doctor and Hygienist if required. Eg. Mary Brown needs to see both Dr Jim and Hygienist Mary at the same appointment. You can view standby records by range of single or multi practitioner number as required.

Sort Order

To streamline database record processing, you can list your records in a variety of sort orders. This can include precedence date order, alphabetical order or even Appointment details—making it easier to identify and process standbys based on type of appointment.

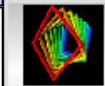

Family Records

Family Members	
Oasis#	Patient Name
000012	peter smith
000013	maru smith
000014	mark smith

Oasis displays a list of all family members in the Standby screen. This makes it easy to create standby records for multiple family members without reloading screen displays.

The Standby Data Entry screen provides a convenient method for linking multi practitioners, standby codes and for describing treatment requirements.

Color Schemes

Colors can also be defined making it easier to identify emergencies and priority records.

Facilities are also provided to link to the Oasis Audio Manager for creating associated voice message files.

A range of helpful reports can also be printed listing and analyzing Standby data.

Treatment Plans

Treatment Plans created manually or through the Oasis charting programs can be linked to the data entry process. This means, when time becomes available you can simply remove the patient from the Standby system and create an appointment using predefined Treatment Plan times and values.
