

# Oasis Practice Management Software

## Practice Statistics

The Oasis Practice Statistics is integral to the Oasis Profit Builder Module. It enables you to analyse data retrieved from the Patient Files, Billing, Recall and Appointment Book programs and in doing so, build a practice profile. Use the Statistics Module to directly improve your business bottom line!

### Production Analysis

Central to Oasis is the Detailed Production System. Firstly you enter in your Goal Hours and Dollars for each operator via a data entry screen or directly within the Appointment Book.

Oasis then takes these Goal figures, Appointment Bookings and actual Invoiced Values to arrive at a comprehensive Production Report. This Report compares all figures and helps you to identify not only an hourly production rate but project cashflows and booked income through the Appointment system.

### Turnover Analysis

Oasis offers a complete range of reports for analyzing your production and turnover. This includes analysis of turnover by type of patient, how contacted, referring doctor, direct referrals, item grouping, patient age.

You can also analyse this data by type and time identifying where you spend most time and where you derive the most income. Data is also comparable on a day by day basis during the month.

Oasis also analyses turnover by type of recall, type of newsletter and reports on your top 'n patients.

#### Statistics Reports

Detailed Production	Turnover by Classification	Turnover by Contact	Turnover by Referring Dr	Turnover by Direct Referral	Turnover by Item Group	Turnover by Patient Age	Invoiced Time Item Group	Invoiced Time/Classify	Invoiced Time/Date
Turnover by Recall	Turnover by Newsletter	Active Patient Count	Turnover by Patient Account	Treatment Acceptance	Invoiced Item Group/ Classify	Appointment Cancellations	Waiting Room Summary		
Patients by Age/Postcode	Patients by Age/Classify	Patients by Age/Ethnicity	Patients by Age/Contact						

### Goal Setting

25	0.00	0.00	0.00

### Patient Lists

The Patient List component helps to build a complete picture of your patient database.

Data is taken from information recorded on the patient record card using user definable lookup tables. It includes lists of patients by age/postcode, age/classification, age/ethnicity and age/contact.
