## Patient Recalls

	<b>How to maximize income potential through returning patients</b>
<b>Multi Recall Types</b>	<b>Custom Labels</b>
OASiS supports up to 9 recall "types" enabling you to create separate recall events for both dentist and hygienist. You can also use the recall system for custom marketing purposes.	Should your practice wish to use pre-printed reminder cards or letters, then it's easy to use OASiS to print out recall details onto continuous form labels or J8160 sheet label formats
<b>Works with Families</b>	<b>SMS and Email</b>
OASiS is the only system on the market that caters well for family recalls. Under OASiS, you can make recall dates for multiple family members with a single key click. OASiS is also smart enough to be able to group families together when sending out recall reminders saving you considerable time and stationery costs. This "smart" recall system prints the family head details (ie Mum, Dad etc) and then constructs a patient reference detailing all recalls due. (ie "You and John are", "Mary is", ) etc.	OASiS Recalls makes use of all new available communication technologies including SMS and Email.  With both types, you can define custom merge messages and in a single run, bulk SMS or bulk Email patients with these merged messages.  Many practices have found this to be a both a time and cost effective method for contacting patients.
<b>Custom Letters</b>	<b>Screen Preview</b>
The OASiS recall system seamlessly integrates with most WP systems including OASiS Word and MS Word. This makes it easy to set up custom form letters including practice letterheads, logos etc that merge the recall data for professionally styled letters. We give you a series of "boiler plate" recall letters that you can easily adapt to your own practice requirements.	To aid recall processing, OASiS offers an on screen list preview system. Patient recalls can be listed in date or surname order for any date range, doctor range, recall range. This is ideal in situations where you want staff to telephone patients or to manage patient recalls on a more individual basis.
	<b>Recall Monitoring</b>
	The OASiS recall system provides a range of reports and functions for analyzing the effectiveness of your recall system.  Firstly, you can identify the number of patients who have responded to your recall correspondence.  Secondly, details of all recalls sent out can be logged into the Clinical Notes system making it easier for the dentist to check on individual patient records.  Thirdly you can identify patients who regularly fail to respond to your recalls assisting you in developing new strategies to get them back to the practice
