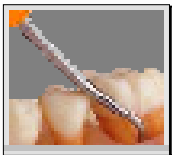
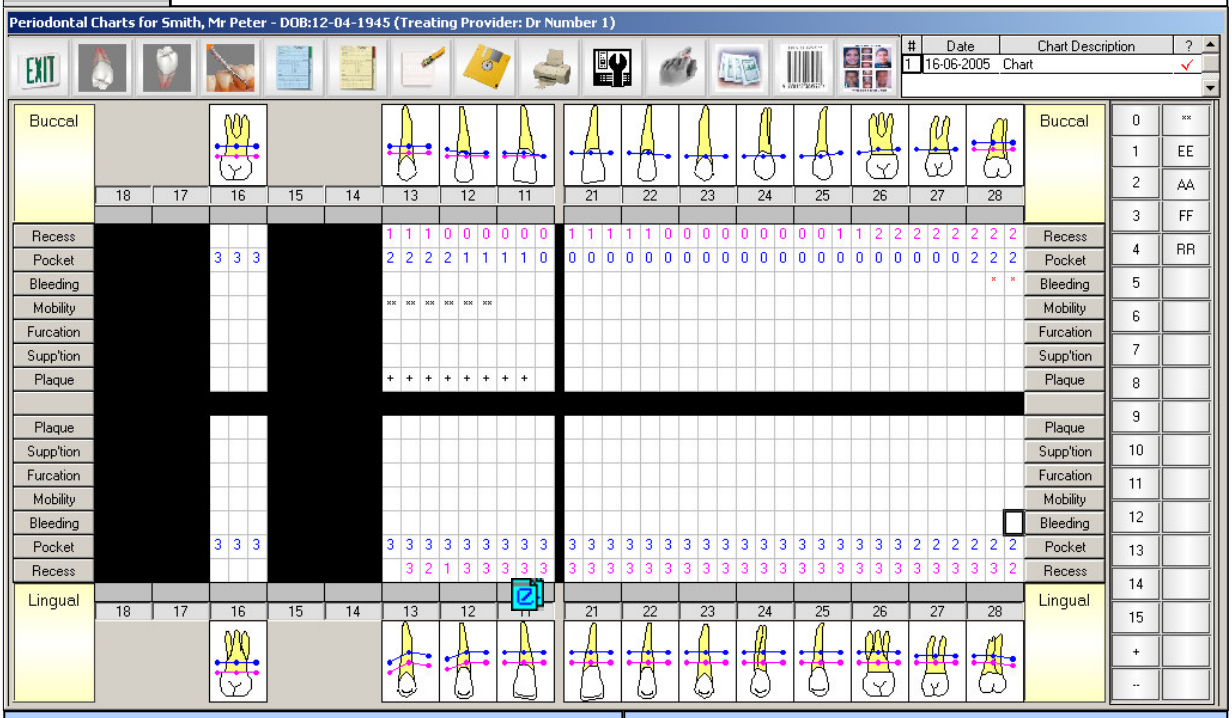
Oasis Practice Management Software

Periodontal Charting



The Oasis Periodontal Charting program enables the fast recording and analysis of periodontal conditions and treatment. The program lets you create up to 999 comparison charts using a spreadsheet like interface with definable buttons, integrated clinical notes and drag/drop icons.



Definable Legend

The charting interface is customizable. You can build your own spreadsheet row legends and keyboard commands customizing it to your own practice needs.

Clinical Notes

The Oasis Clinical Note system is directly link to the Periodontal charting system. This enables you to write and view tooth related notes and to mark notes using color or picture icon selection.

Data Entry

Data can be inserted into any cell using the keyboard command legend (ideal for touch screens) or via direct keyboard entry. Voice activation is intended for release in a future version. Pocket and Recession measurements are automatically graphed as entry occurs and Oasis provides the facility to click on points on each graphical tooth and place custom picture icons on the tooth. This is ideal for showing unusual tooth conditions or treatment. Icons are created and edited using the Oasis Icon Editor included with each Oasis system.

Chart Presentation

Each selected Periodontal chart can be printed in color or monochrome as required depending on your own hardware requirements.

Alternatively, any chart can be exported to PDF format or imported into the Oasis Presentation Manager for professional styled treatment plans.
